

Chinese Aerospace Team Trains at NTI (October 2008)

FENSAP-ICE is rapidly demonstrating that it has become the simulation system of choice for Chinese aircraft manufacturers to reduce the cost and time for certification for flying into known icing (FIKI).

Chinese scientists from the First Aircraft Institute of Xi'an, part of the AVIC conglomerate, have come to Montreal for a full month personalized training on all aspects of FENSAP-ICE.

FENSAP-ICE is used in China, at several companies, for a multitude of aircraft projects.
